## **Oscilloscope GUI Project**

After completing the Pair Game project, my internship advisor asked me to design a remote-control interface for my last project, the Rohde&Schwarz RTA4004 Oscilloscope. The oscilloscope I used in this project is shown in the image below.

Figure 1 The Picture of Rohde&Schwarz RTA4004

I first started the project by reading the remote-control sections in the manual of the Rohde&Schwarz RTA4004 device. Since I had never remotely controlled any device before, I asked my internship advisor about the parts of the booklet that I did not understand.

First, I researched the methods of connecting the oscilloscope to the computer. I had two different connection options: wireless via ethernet or wired via USB. My internship advisor asked me to connect it to the computer with a USB cable, which is a wired connection method. Then, I installed the driver files on the website of the Rohde&Schwarz RTA4004 device to my computer so that the computer could recognize the oscilloscope. The codes I wrote to connect the oscilloscope and the computer in the Visual Studio 2022 program are shown in the image below.

Figure 2 The Picture of Oscilloscope GUI Project: Connection of the Oscilloscope

After the device was connected to my computer, I designed the Form 1 interface. The Form 1 interface I designed is shown in the image below.

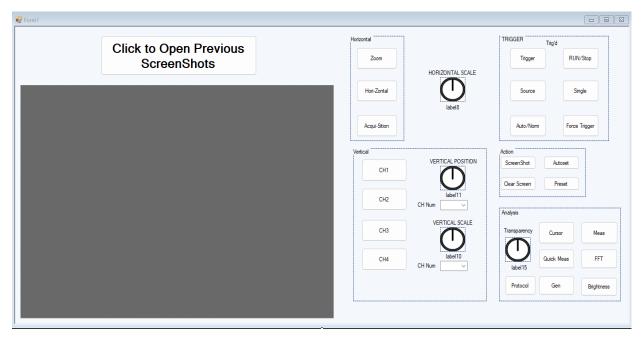

Figure 3 The Picture of Oscilloscope GUI Project: Form 1 Design

Since the Rohde&Schwarz RTA4004 device is a very complex device, my internship advisor asked me to add the features seen in *Figure 3*. The main features of the buttons in the interface shown in *Figure 3* are given below.

- **Run/Stop:** It is the button that continues/stops the image on the oscilloscope.
- **Trigger:** The level at which the oscilloscope will start measuring the signal is set with this button.
- **Source:** This is the key that determines the source from which the oscilloscope will receive input.
- **Single:** This is the button used for single scanning.
- **Auto/Norm:** Auto or normal is selected for trigger.
- ForceTrigger: It is used to read the input at that moment without waiting for the trigger.
- **Screen Shot:** Instant screenshot is taken.
- **Autoset:** When Autoset is pressed, trigger settings are made automatically.
- Clear Screen: It ensures that the screen comes to its original state in confusion.
- **Preset:** Reset means that the features return to their original state.
- **Zoom:** It is used to zoom in or out.
- **Horizontal:** It enables the movement of the shape on the screen.
- **Acquisition:** It is decided how the oscilloscope will digitize the signal before displaying it.
- CH1/CH2/CH3/CH4: There are 4 different channel types. It is used for multiple analysis.
- **Cursor:** This is the part where graphic options are made.
- **Measure:** It makes calculations of the signals in the oscilloscope.
- Quick Measure: It allows quick calculation of current signals.

- **FFT:** The magnitude of the specified frequencies is displayed: power-frequency diagram.
- **Protocol:** It describes how a value is encoded into a waveform of a specific shape.
- **Generator:** Adjusts the signal generator settings of the oscilloscope.
- **Brightness:** This is the button used to adjust the brightness of the oscilloscope screen.

As you can see, since the device has a very complex structure, I wrote the codes in separate Classes in this project to make them appear more understandable. The name of this Class I wrote is "RTA4004". RTA 4004 Class includes codes written in C# to be understood by the oscilloscope. The display formats of the codes in RTA 4004 are written as in the Oscilloscope booklet. In this way, when the codes in other forms are sent to the RTA4004 Class, the relevant commands are made by the oscilloscope.

The codes written for the oscilloscope to understand the "RUN, STOP, SINGLE, AUTO, TRIGGER, FORCE TRIGGER" commands are given in the image below.

```
public RTAM88M(string visaSrcName, bool reset = true)...
| TaNyour
| public void Run() // Oscilloscope'a gönderilen Run komutunu oscilloscope tarafından uygulanması sağlanır.
| RTAM88M_scope.DoCommand("RUN");
| TaNyour
| public void Stop() // Oscilloscope'a gönderilen Stop komutunu oscilloscope tarafından uygulanması sağlanır.
| RTAM88M_scope.DoCommand("STOP");
| Public void Single() //Oscilloscope'a gönderilen Single komutunun oscilloscope tarafından uygulanması sağlanır.
| RTAM88M_scope.DoCommand("SINGle");
| Public void TriggerModeAuto() //Oscilloscope'a gönderilen TriggerMode komutunun oscilloscope tarafından uygulanarak AUTO şekline geçmesi sağlanır.
| RTAM88M_scope.DoCommand("TRIGger:A:MODE" + " AUTO");
| Daguvu
| public void TriggerModeNormal() //Oscilloscope'a gönderilen TriggerMode komutunun oscilloscope tarafından uygulanarak NORMAL şekline geçmesi sağlanır.
| RTAM88M_scope.DoCommand("TRIGger:A:MODE" + " NORMal");
| Public void TriggerModeNormal() //Oscilloscope'a gönderilen ForceTrigger komutunun oscilloscope tarafından uygulanarak NORMAL şekline geçmesi sağlanır.
| RTAM88M_scope.DoCommand("TRIGger:A:MODE" + " NORMal");
| Public void ForceTrigger() //Oscilloscope'a gönderilen ForceTrigger komutunun oscilloscope tarafından uygulanması sağlanır.
| RTAM88M_scope.DoCommand("TRIGger:A:MODE" + " NORMal");
| Public void ForceTrigger() //Oscilloscope'a gönderilen ForceTrigger komutunun oscilloscope tarafından uygulanması sağlanır.
| RTAM88M_scope.DoCommand("*TRIGger:A:MODE" + " NORMal");
```

Figure 4 The Picture of Oscilloscope GUI Project: RTA4004 Codes 1

The codes written for the oscilloscope to understand the "CH1/CH2/CH3/CH4 SOURCE, AUTOSCALE, CLEARSCREEN, PRESET" commands are given in the image below.

```
public void TriggerSourceCH1() //Oscilloscope'a gönderilen TriggerSource komutunun oscilloscope tarafından kaynağın CH1'e ayarlanması sağlanır.

| RTAH084_scope_DoCommand("TRIGger:A:SOURce" + " CH1");
| Pappuru
| public void TriggerSourceCH2() //Oscilloscope'a gönderilen TriggerSource komutunun oscilloscope tarafından kaynağın CH2'e ayarlanması sağlanır.
| RTAH084_scope_DoCommand("TRIGger:A:SOURce" + " CH2");
| Pappuru
| public void TriggerModeSourceCH3() //Oscilloscope'a gönderilen TriggerSource komutunun oscilloscope tarafından kaynağın CH3'e ayarlanması sağlanır.
| RTAH084_scope_DoCommand("TRIGger:A:SOURce" + " CH3");
| Pappuru
| public void TriggerModeSourceCH4() //Oscilloscope'a gönderilen TriggerSource komutunun oscilloscope tarafından kaynağın CH4'e ayarlanması sağlanır.
| RTAH084_scope_DoCommand("TRIGger:A:SOURce" + " CH4");
| Pappuru
| public void Autoscale() //Oscilloscope'a gönderilen Autoscale komutunun oscilloscope tarafından AotuSet şeklinde ayarlanması sağlanır.
| RTAH084_scope_DoCommand("AUToscale");
| Pappuru
| public void (learscreen() //Oscilloscope'a gönderilen ClearScreen komutunun oscilloscope tarafından ClearScreen şeklinde ayarlanması sağlanır.
| RTAH084_scope_DoCommand("DISPlay:CLEar:SCReen");
| Pappuru
| public void Reset(int delay) //Oscilloscope'a gönderilen Reset komutunun oscilloscope tarafından Preset şeklinde ayarlanması sağlanır.
| RTAH084_scope_DoCommand("AUToscale");
| Pappuru
| Public void Reset(int delay) //Oscilloscope'a gönderilen Reset komutunun oscilloscope tarafından Preset şeklinde ayarlanması sağlanır.
| RTAH084_scope_DoCommand("AUToscale");
| System_Threading_Thread_SLeep(delay);
```

Figure 10 The Picture of Oscilloscope GUI Project: RTA4004 Codes 7

The codes of the RTA4004 Class given in the images above are the codes that provide the connection between the oscilloscope and the computer. The codes given after this section are codes given for calculations, design of forms and similar features in C#.

When I look at the image in *Figure 3*, the codes of the keys that do not open a new form are written in the Form1.cs file. These keys are mainly "RUN/STOP, Single, AUTO/NORM, SOURCE, AUTOSET/PRESET/CLEARSCREEN, Click to Open Previous ScreenShots". The images of these buttons are shown below.

Images of the codes of the "RUN/STOP" button are given below.

Figure 11 The Picture of Oscilloscope GUI Project: Form 1 RUN/STOP Codes

Images of the codes of the "SINGLE" button are given below.

```
private void button7_Click(object sender, EventArgs e)

{
    counter++; //Kullanıcı Single tuşuna bastığında counter değişkeni 1 arttırılır.
    if (counter % 2 == 1) //Counter değişkeni tek sayı ise bu single tuşunun tuşlanmadığı anlaşılır ve aşağıdaki işlemler gerçekleştirilir.
    {
        RTA4004_scope.Single(); //Oscilloscope'a Single komutunu verir.
        button7.BackColor = Color.White; //Komutu verildiğinin anlaşılması için rengini White'a dönüştürürüz.
        button4.BackColor = Color.Red; //Yeşil şekilde Run/Stop tuşuna basıldığında bu kısıma gelerek tuşun rengi kırmızı yapılır.
    }
    else //Counter değişkeni çift sayı ise bu single tuşunun tuşlandığı anlaşılır ve aşağıdaki işlemler gerçekleştirilir.
    {
        button7.BackColor = Color.White; //Komutu verildiğinin anlaşılması için rengini White'a dönüştürürüz.
        RTA4004_scope.Single(); //Oscilloscope'a Single komutunu verir.
    }
}
```

Figure 12 The Picture of Oscilloscope GUI Project: Form 1 SINGLE Codes

Images of the codes of the "AUTO/NORM" button are given below.

```
public void button6_Click(object sender, EventArgs e)
{
    counter++; //Kullanıcı Auto/Norm tuşuna bastığında counter değişkeni 1 arttırılır.
    if (counter % 2 == 0)
    {
        RTA4004_scope.TriggerModeAuto(); //Oscilloscope'a Auto/Norm komutunda Trigger Mode'ta Auto seçeneğine geçilir.
        triggermodeNorm = 0;
        button6.BackColor = SystemColors.Control; //Komutu değiştirdiğimizin anlaşılması için rengini eski rengi olan Control'e dönüştürürüz.
        label6.BackColor = SystemColors.Control;
    }
    else
    {
        RTA4004_scope.TriggerModeNormal(); //Oscilloscope'a Auto/Norm komutunda Trigger Mode'ta Norm seçeneğine geçilir.
        button6.BackColor = Color.White; //Komutu verildiğinin anlaşılması için rengini White'a dönüştürürüz.
        triggermodeNorm = 1;
    }
}
```

Figure 32 The Picture of Oscilloscope GUI Project: FFT Form Design

"Source, Type, Vertical Scale, Spectogram, Automatic RBW, PeakList, Marker Source, WaveForm Average WaveForm Spectrum, WaveForm Max, WaveForm Min" values are set by the user using the FFT Form seen in Figure 32. The values requested by the user are transmitted to the Oscilloscope through the FFT function in the RTA 4004 Class shown in Figure 9. The codes for the FFT Form are given in the image below.

```
private void button2_Click(object sender, EventArgs e)
{
Form1 frm1 = new Form1(); //Bu formdaki bulunan Back tuşuna basıldığında Form1'e geri dönüş sağlanır.
this.Close(); //Bu form kapatılır.
frm1.Show(); //Form 1'in açılması sağlanır.
}
lbaşvuru
private void button1_Click(object sender, EventArgs e)
{
RTA4004_scope.fft(comboBox1.Text, comboBox2.Text, comboBox3.Text, comboBox9.Text, comboBox10.Text, comboBox11.Text, comboBox4.Text, comboBox5.Text, comboBox6.Text, comboBox7.Text, comboBox8.Text);
//FFT formunda kullanıcının girdiği değerleri Oscilloscope'a akatramak için kullanılır.
```

**The Generator Form** that appears before the user when **the Generator** button in the image in **Figure 3** is pressed is given in the image below.

☑ Generator	
!	<u>Generator</u>
Output Enable	
Function	
Amplitude	6.0000E-02 to 6.00000E+00
Offset	-3.00000E+00 to 3.00000E+00
Frequency	Hz
Noise	<u></u> %
Apply	Back

Figure 34 The Picture of Oscilloscope GUI Project: Generator Form Design

"Output Enable, Function, Amplitude, Offset, Frequency, Noise" values are adjusted by the user using the Generator Form seen in Figure 34. The values requested by the user are transmitted to the oscilloscope through the Generator function in the RTA 4004 Class shown in Figure 9. The codes for the Generator Form are given in the image below.

```
private void button2_click(object sender, EventArgs e)

{
    Form1 frm1 = new Form1(); //Bu formdaki bulunan Back tuşuna basıldığında Form1'e geri dönüş sağlanır.
    this.close(); //Bu form kapatılır.
    frm1.Show(); //Form 1'in açılması sağlanır.
}
